Boston University Sydney

Building an urban campus to accommodate and educate students in a foreign city challenged the design team to construct a building environment containing multiple use of the sites natural light, ventilation and outlook while retaining student privacy.

With a site in the heart of Sydney's university precinct bordering three street frontages, four corridors were cut to the buildings core and 185 window notches created in the **StoTherm Classic Facade** by Sydney Sto Applicator DE3 Plastering Services

Plaster technology in a pail building a new era of confidence
